

Photoshop Training: Complete 4-day course

Introduction to Photoshop

- History and evolution of the software
- Getting started with the interface
- Overview of key features
- Customizing and managing workspaces
- Introduction to Mini-Bridge

Mastering the Essentials

- Understanding resolution and image definition
- Difference between image size and canvas size
- Introduction to essential tools: selection, text, hand, zoom, etc.
- Overview of palettes: shapes, layers, colors, paths...
- Understanding CMYK vs. RGB color modes
- Separation modes: print, video, spot color, duotone...
- Using web-safe color palettes

Image Adjustment and Optimization

- Using the adjustments panel
- Sharpening and correcting curves and levels
- Adjusting brightness, contrast, and saturation
- Enhancing shadows and highlights
- Applying transformations: scale, rotate, flip, warp...

Working with Layers

- Understanding different types of layers
- Organizing, managing, and merging layers
- Using transparency and blend modes
- Applying adjustment, fill, and text layers
- Creating and managing layer masks

Selection Tools and Techniques

- Selection tools: Marquee, Lasso, Magic Wand, etc.
- Creating, saving, and transforming selections
- Using options: feathering, quick mask mode, color range
- Applying gradients, swatches, styles, Pantone...
- Hands-on workshop: creating a pattern

Vector Graphics in Photoshop

- Working with vector shapes
- Using the Pen tool and Bézier curves
- Managing anchor points
- Performing precise cut-outs

Exporting Your Work

- Saving files for print
- Optimizing and exporting for the web

Color Management

- Adjusting and applying colors
- Using the Gradient tool

Paths and Dynamic Shapes

- Handling multiple selections
- Advanced shape properties: rounding and dynamic behavior

Advanced Photo Retouching

- Using the adjustments panel and histogram
- Targeted corrections: shadows, midtones, highlights
- Advanced tools: lens correction, blur effects, perspective
